- Assign access rights to users
- Multi pack discount

eZee Sync is designed to integrate your Head office / corporate office to your retail chain, extensions or franchises. It is intended to manage all the information and functions of a business from the head office. Using eZee Sync, your purchases can be done centrally from the head office with the receipts made at the warehouse. All promotions are controlled centrally from the head office. Sales, Purchase and stock information are consolidated across all warehouses and can be viewed at the head office. eZee Sync can be connected to eZee BurrP! software. Typically multiple warehouses across geographical zones are connected to the head office software. All the masters are created at the head office and the same are synchronized with the warehouse and from there to the stores. This enables maintenance of uniformity while creating new products.
